

Project Update: December 2010

Our winter trip was completed successfully. Its field part lasted from 25th November to 17th December 2010. We managed to survey part of Urts Range, Zangezur Range (from Gazan-Gel Valley to Kajaran Valley) and Bargushat Range, part of Megri Range (Nuvadi Valley), then returned to Erevan and finally went to Kakavaberd branch of Khosrov NR situated near the city.

We counted, aged and sexed 60 wild goats in Kakavaberd, none in Urts, 191 on Megri Range and 84 in Zangezur and Bargushat. Besides, we saw at least 72 mouflons in Urts and 12 Zangezur (there might have been repeated sightings), five roe deer in Bargushat and 12 wild boar in Kakavaberd.

We also found and measured three wild goat horns (two males and one female, which was found recently killed by a falling stone).
