

Project Update: May 2010

I started my project work on 1st May 2010. I already visited one of my study sites, Joypur Reserve Forest in Dibrugar district in Assam. I and my PA observed 110 butterfly species including almost 520 individuals. During our 7 day visit we observed some uncommon butterfly species like imperial blue, white dragontail, diadem dusky, five bar swordtail and great nabab.

Fig : Few uncommon butterflies spotted from Joypur RF
