

## Project Update: May 2012

Youths have identified the causes and impacts of coral reef degradation on their lives. We have discussed about which issues are to be raised in the documentary films which will be used to increase wider fishers and public awareness about the importance of coral reef for people's livelihood. The documentary films focus on:

The state of the coral reef along the north coast of Sumbawa District and its impacts on fish abundance and diversity.

The social and economic state of fisher families.

Fishers' wives' coping strategies during difficult times.
