

## Project Update: February 2017

The New Year marks the beginning of activities for The Reef-World Foundation's (RWF) completion grant with RSGF. RWF has now expanded the Green Fins (GF) initiative to over 500 members across six countries in Asia and is focussing on replicating this success in Indonesia. Following the successful national management strategy developed for GF Malaysia, RWF has proposed that the Indonesian Ministry of Environment and Forestry (MoEF) partner with national NGO, the Coral Triangle Centre (CTC), to oversee GF operations.

RWF is working with CTC to identify five to seven suitable individuals to receive standardised capacity development training (including the 6-day GF Assessor Training Programme) to establish a proficient, local GF Assessor Team in the pilot site of Sanur, Bali. Pilot implementation will include the recruitment of 20 new GF members and conclude with the development of a comprehensive site level action plan to respond to local environmental threats and opportunities.
