

Save bats of Cameroon

Bats have high economic and ecological importance, yet they remain largely unstudied. To date, at least 75 species of bats have been identified in Cameroon. Various social prejudices contribute to their persecution at both national and international scale. With the current habitat loss due to human activities, many species are predicted to decline. The protection of these animals will contribute to preserve their ecological and economical integral roles.

Eidolon helvum

Epomophorus gambianus

Micropteropus pusillus

Nycticeinops schlegelii

Pipistrellus inexpectatus

Pipistrellus nathusii

Scotophilus dinganii

Scotophilus leucogaster

Scotoecus hirundo

Chaerephon pumilus

Mops brachypterus

Chaerephon limbata

Chaerephon major

Chaerephon nigeria

Chaerephon leucogaster

Chaerephon chapini

Mops niveiventris

Mops condyloides

Rhinolophus macdonaldi

Scotophilus nigrata

Glaucomycteris variegata

Hipposideros beatus

Epomops franqueti

Hipposideros ruber

Rousettus argyripectus

With the current habitat loss due to human activities, many bats species are predicted to decline. Bats need urgent conservation action in Cameroon.

Education will efficiently dispel various social prejudices on bats and positively change the behavior of students and youths.

It is beneficial to teach youths to form different impressions about bats and to develop empathy and understanding the interdependence between bats and ecosystem.

SAVE BATS OF CAMEROON

Bats are animals with nocturnal activities. Various social prejudices contribute to the persecution of these animals at both national and international scale.

Cameroon is a highly diversity country with a relatively large bat fauna. To date, at least 75 species of bats have been identified.
