

Project Update: April 2014

Seedlings: in Andriamanero, 70% of the seedlings that we planted growth normally along the road to the Piscine Bleu. Also, we hope that if there is no bush fire, the road will be beautiful with these trees. In Anakandrarezo, we found that it is only 45% which growth in the area where we planted these seedlings. We asked them why, they said that there were some problems (ethnic conflicts between local people) and the trees entertainment is deleted.

Seeds: in Andriamanero, only the Ananambo (*Moringa olifera*) grow and many villagers planted it in their garden. For the other seeds, none of them grow. We asked them why and they do not know. May be there is some problem with the seed that we bought, or the local population do not assimilate the training. In Andriamanero, we found that none of the seed growth. Also, we think that the problem is the same as for seedlings.

Frogs: as we asked the park agent to survey these important species, they follow our recommendation. However, they said that during their investigation, they do not find any species especially for rainbow frogs. They observed also that rain varies considerably and in east, it was very dry and, in the west,, there are some bush fire. Also, we think that these situations have some consequences on the species!!!
