

Project Update: June 2013

Plant nutrient content analysis

Plant nutrient contents of 21 different species were tested with nine different parameters (nitrogen, protein, crude fat, crude fibre, ash, moisture, carbohydrate, calcium and sodium). Laboratory test reports have been received and I am working for analysing the results of reports. Accordingly diet analysis of the dung samples are due to be received in coming days.

Conservation Awareness

Awareness programmes about importance of *Bubalus arnee* were conducted in buffer zone of KTWR through drawing competition organised in local school, visiting local community. Similarly, a drama group was requested to perform awareness session through comedy drama about significance of *Bubalus arnee* during traditional drama programme which is locally called "Ram Lila".
