

## Project Update: March 2013

We have successfully finished the construction work and brought the desired piglets breed into our farm. The construction work is going to improve the standard of living space, especially the urine and dung collection chamber. The expansion of the grower' pen has been equipped with both feed and water drinking troughs and a sun bathing yard. A farmer training hall has also been constructed and is already equipped with furniture. The sign post for our organisation has also been made and installed.

Find out more about us on our CIBC page on my Facebook page ([tusingwirejohnbosco](#)).
