

Project Update: January 2014

According to our planned schedule, we continue to take images of herbarium sheets from most important herbaria in Turkey. Aegean and Mediterranean regions of Turkey have unique habitats for the distribution of most of *Ophrys* and *Orchis* species. Therefore we included some relatively small sized but orchid – rich Herbaria such as Muğla University Herbarium and Ege University Pharmacy Herbarium to our visits.

We've photographed 800 herbarium sheets just from Ege University Pharmacy Herbarium, Ege University Biology Herbarium and Muğla University Biology Herbarium. Our next visits are going to be as follows in next month:

- Ankara Hacettepe University Biology Herbarium;
- Ankara Hacettepe University Pharmacy Herbarium;
- Naturhistorisches Museum Wien;
- Van Yüzüncü Yıl University.

We are going to share the results of our next Herbaria visits.
