

## Project Update: September 2013

I have formed the Program Management Committee and revitalized the Small farmers Groups in each VDC including the members from all wards (there are nine wards in each VDC). Similarly, the training and workshops to the small farmers groups is completed in two VDCs, i.e. Bhaudaure and Chapkot. Further, I am working for the selection of the best place and very interested progressive farmer for the establishment of demonstration plot which will soon be established. For this I am consulting the agriculture scientists at District Agriculture research office. I have attached some photos of training and meetings and workshops.

### **Community Reaction**

- They are very eager about the demonstration plot and asked me to establish in their own land.

- They asked the benefit as well as the disadvantages of agroforestry such as if agroforestry is developed in their crop land then the birds and animals like monkeys destroy the crops. So, what is its solution?
- Similarly, their interest was more on detail knowledge about the selection of right species according to the climatic and land situation, shade tolerant species, species that favour the wet places and species that need more light etc.
