

Project Update: February 2014

During December 2013 and January 2014, the Reef Conservation Project, in partnership with the Brazilian Navy and Tamandaré City Environmental chair, performed environmental supervision in the “Carneiros Beach” area, site of the present project.

Approximately 30 jet skis and 12 vessels, including three catamarans (one undocumented) were addressed. Education campaigns in waterway traffic were also conducted in the same day.

The Reef Conservation Project with the Rufford Small Grants support is trying to promote the zoning of the reef area ensuring sustainability for coral reefs in the northeast Brazil.
