

## Project Update: January 2016

In November and December 2015 we organised several workshops with advanced pupils of the primary and secondary schools in Ulcinj and Podgorica. Pupils from Podgorica were partly informed about the biological and ecological values of the Long Beach in Ulcinj, thus the workshop has a real educational character. Pupils from the Primary school "Maršal Tito" in Ulcinj were already involved in activities considering promotion of the biological values of the Long Beach and participated

in the seasonal sanitary actions. They even prepared few short films about the beach and presented them at the end of the workshops. In addition they expressed a will to participate in all future activities considering conservation of the long beach in Ulcinj.

Parallel to this activities we finish another scientific publication. During the field research we recorded a new alien species for the flora of Montenegro- *Cenchrus spinifex*. Up to now, this is a second scientific publication. Another two are in preparation.

Future activities:

Promotion of the project in the frame of the study visit to the Institute of Plant Sciences in Graz, Austria. This activity was not included in the project application, because in that moment we did not have information about the visit.
