Mabula Ground-Hornbill Project

Reporting Period: April 2014 – September 2014

Summary: The last six months have seen a growing focus on community-based conservation projects at three sites in KwaZulu-Natal: Melmoth, Hlokozi and Creighton. These areas hold the greatest populations outside of Kruger National Park and although there is a strong cultural protection, a growing human population with growing land-use requirements and an erosion of cultural values amongst younger residents means we have to work hard to ensure this protection is nurtured. A partnership with a local NGO is proving hugely successful, with a new reserve pending, growing conservation awareness in these areas and an opportunity for us to grow conservation capacity. With an expanding schools education programme and our latest releases ticking along nicely, we are now just waiting for arrival of the rains to herald the new breeding

Executant: Lucy Kemp

Mabula Ground-Hornbill Project
(016-183 NPO & 13/00/00/723 PBO)

HIGHLIGHTS OF THE PAST SIX MONTHS

SPRING HAS SPRUNG AND NEW PARTNERSHIPS ABROAD

Natasha & Hein are married ⁽³⁾

A partnership to grow conservation capacity in southern KwaZulu-Natal

We have partnered with a NGO, Woman's Leadership and Training Programme (WLTP), to help build conservation capacity under their biodiversity portfolio and to allow us an understanding of the status of the Southern Ground-Hornbill in their focal areas. The pilot project was an astounding success, with one of the outcomes being the Hlokozi Traditional Authorities setting aside part of their land as a reserve, a refuge for wildlife while they work on some of the more pressing conservation issues; another is formal protection for the species. The reserve will be an estimated 18 000 ha; big enough for two hornbill families. Since then we hosted some of WLTP team leaders for a week of training in GPS use, mapping, data collection, management and analysis so that they can run with their Ground-Hornbill Project. We can't wait to learn from their findings.

Mpumalanga Tourism and Parks Agency commit to land & support for a new hand-rearing centre

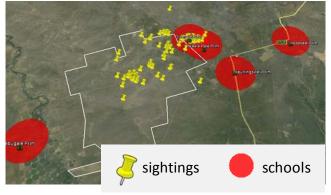

Mpumalanga Tourism and Parks Agency (MTPA), the nature conservation authorities in the Mpumalanga Province have committed to assisting us with land and support for a specialized hand-rearing and socialising centre for the harvested 'doomed' second chicks. Now that we have their commitment we can start the planning, fund-raising and building. We are hosting a workshop at Loskop Dam reserve in early October at the site of the new centre, in order to get the best advice from all stakeholders on how to design the best centre for the purposes. Once we have decided what is best then the fund-raising starts. We aim to have the centre up and running by the 2015 breeding season. A really important step forward to the sustainability of the programme – exciting and a little daunting.

NEWS FROM CURRENT RELEASE SITES

Mabula: The Action Group supported our request to capture a wild female from the Kapama/ Hoedspruit Endangered Species Centre. She had left or was forced out of her natal group and had bonded with the birds in their aviary – spending all day around the aviary and unlikely to go off and find her own breeding position. Being wild though, we first needed to refurbish our aviary as we did not want to risk any injury to a more flighty wild bird. We then moved a young male (Addgar, APNR harvest, Loskop rear, age ~7 months) who settled into the aviary quickly. Then we caught the wild female and swiftly transported her to Mabula, to release her into the refurbished aviary with Addgar. Storm's behaviour was very strange on her arrival – he saw her released into the aviary and instead of investigating as he would usually do he went off to roost an hour early and then snuck back into camp at very first light to come and investigate. Shy? After this awkward introduction their behaviours suggested the release would go smoothly – he was courtship preening her through the fencing and never left her side, other than to go off and get a big bundle of nest material or a snack for her. Meanwhile Mokaikai bonded with Addgar. Since the release on the 9th September the group of five have been inseparable and the female is showing an increasing interest in the nest! We are grateful to Lente Roode for making all of this possible.

Thabazimbi: Jac's group has remained on the reserve for nearly a year now. When spotted they appear to be doing well, all foraging together, but no sign of nest-searching behaviour yet. They also haven't shown any need for supplementary feeding. The last few weeks before the rains though will be the final test of the suitability of the site. They remain very wild and this has necessitated the acquisition of a 60x telescope in order to monitor them as 10 x binoculars were proving insufficient © next step: an artificial nest.

Madikwe: The two release birds that started the 'girl' group split up in March, with Ceon moving into Botswana and Nkosi choosing to stay on the farms where they had settled. Why the split happened we will probably never know but we surveyed a 220 km stretch of the Marico river border between South Africa and Botswana and received positive reports of her well away from the border and within 20 km of existing hornbill groups — a very small distance in hornbill terms. Due to Ceon's dispersal we have moved Nkosi back to captivity to be included in the captive breeding programme. She is reaching breeding age and we expect, as with other imprinted female in the past, that she will become aggressive becoming a liability to herself, and the humans she chooses to be with, and so it was not safe to leave her where she was. She has settled down well, bonded well with her new mate, Ntwane (a parent-reared hornbill with five seasons of helping experience) and has taken charge of the juveniles in the aviary with her.

Loskop Dam: The release aviary is complete and now we await the capture of the wild sub-adult male from the APNR. Permission to attempt capture was granted again and so the APNR team will, as part of Kate Carstens' PhD, do the capture and transport the bird to Loskop Dam.

ACTIVE THREAT MITIGATION

Lead poisoning: A research paper is in press and will be used as the basis of an awareness campaign.

Window-breaking: Continued discussion with affected farmers. We co-authored the Ground-Hornbill section of the EWT publication 'Humans & Birds'. Window-breaking at the schools in the Melmoth region is rife and we hope to ask forestry companies to assist in repairing and then covering the windows so the problem does not continue.

Habitat destruction & degradation: We are happy to be collaborating with Megan Loftie-Eaton from the Animal Demography Unit at the University of Cape Town as her PhD is going to start to try and unravel the effects of bush encroachment on Ground-Hornbill declines. We will be working closely with her and are thrilled she has taken on this challenge.

Loss of nests: We have five nest designs of various materials being built to start testing for temperature, humidity and general suitability from early November.

Electrocution: ESKOM came to Mabula and insulated one transformer box. Their consulting engineers also attended to see what the issues are in order to start working on new, more cost-effective designs of transformer box insulation.

LOWLIGHTS

This was a very productive six months for us with the only lowlight being the closure of the Madikwe release site since the dispersal of the female to Botswana and the return of the habituated bird to captivity. This, in a way though, can also be seen as a highlight as this site has taught us so much in terms of habitat suitability, individual preferences, risk of a group without a wild leader and more.

PLANS FOR THE NEXT FEW MONTHS

Nest checks: we will be monitoring the Limpopo River Valley nests, the known KwaZulu-Natal nests and looking for new nests.

Swaziland: we did a preliminary assessment trip to Swaziland to discuss the current status of the species in the Kingdom and what potential exists for recovery. We will follow this up with surveys during the breeding season.

Genetics samples: We will be spending time in the lab processing the latest batch of samples from museums around the world.

Mobile Boma: We have sponsorship from Montecasino Bird Gardens for two mobile units and once the plans are complete we will start construction.

Loskop release: We are still looking for funding for the salary of a monitor but this release will be initiated in the next month.

Museum samples: We will continue gathering museum samples for analysis.

Reintroduction Plan: We have completed a draft plan now out for circulation and comment.

Education & Awareness: We will focus on the Limpopo River Valley for the rest of this year.

Threat mitigation: Once our paper is published we will use that to spring-board the education campaign about 'green' ammunition.

Custodianship Programme: We will complete the first draft of a custodianship agreement to start testing the model on a sub-set of landowners.

EDUCATION & AWARENESS in the last six months

*all sponsors and collaborators are acknowledged in presentations and reports

Print media:

- •We had an article published in the SA Vet newsletter calling for information of past hornbills brought in and to contact us if there are any further cases.
- •The Hornbills of the World book got an excellent review in the May/June Birdlife magazine.
- Mercury newspaper article (Durban)
- •Field Guide Association of South Africa (FGASA): an article was printed in the FGASA newsletter and an ID card with an ID kit on one side and SGH information on the other was distributed with each newsletter so that field guides have the card with them for telling their guests the latest information, being able to age and sex the birds and our contact details for sightings.

Online: We have a growing Facebook following with many Zulu learners now using this platform to report sightings of birds in their areas.

Newsletter: Boom Newsletter: June & September.

Conferences/Meetings:

We hosted both the 2nd Science Colloquium and Action Group Meeting.

Presentations:

- •Weekly Modjadji teas and hornbill drives;
- •Filming for NZG showcase;
- •Mabula Field Rangers & Timeshare staff.
- •Port Natal Bird Club + Himeville Bird Club + Ixopo WLTP Bird Club.
- •MGHP hosted the Leeupoort Conservancy at Mabula (48 people) for a talk and dinner.

Land Owner Engagement: We went to Loskop Dam Nature Reserve (LDNR) to do a community outreach for MTPA. More than 130 people who work at LDNR (many from the Expanded Public Works Programme) and thus extracted from neighbouring communities and their children attended the outreach programme.

Schools:

- •We went to Melmoth, Southern Zululand, to initiate a pilot project aimed at awareness in rural schools in the area. Eighteen schools visited over nine school days. Each school received a short presentation followed by an activity, and the learners shared their knowledge and stories about the birds. It was an intense two weeks with near 8000 children being educated. A full report was compiled and circulated to Ezamvelo KZN, farmers, schools and forestry. Report available on request.
- •Outreach to eight schools in the Thaba Tholo area.
- •Representatives from eight schools in the Ixopo and Highflats areas.
- •We have trained the trainers and prepared all the material used for Childrens' Eco Training in Klaserie for a four-day hornbill holiday workshop. This reaches children from communities surrounding the Greater Kruger National Park where there are still scattered hornbill groups.

Other: SASOL Birdlife Bird Fair, Walter Sisulu Botanical Gardens.

FINANCIAL STATE OF THE PROJECT: SUSTAINABLE

We are extremely grateful for all the sponsorship and support that we received in the last six months as this Project continues to grow (see Table 2 for details). It has meant that we are able to take on new interns to grow our team. We actively campaign for new donors to raise funds for ongoing projects and ensure that current donor requirements are met to ensure their continued support.

MGHP is registered as a Non Profit Organisation (NPO) under Section 1 of the NPO Act and a Public Benefit Organisation (PBO), under Section 18 of the Act. Income is generated through donations, conservation grants, sale of goods developed through the conservation craft initiative and interest on cash

- Self generated
- BirdLife & Bird Clubs
- ☑ Conservation Grants Europe

SA Corporate balances. In meeting all the requirements for a Section 18a NPO, a percentage of any monetary donations to the project are tax deductable in South Africa. Please contact us for more information.

Conservation Grants: U.S.A.

Table 2: Details of sponsorship over last six months and staff developments.

SPONSORSHIP STAFF Primary: Conservation Interns: **Disney Conservation Fund** Sophie Neller (UK) has brought her experience of SASOL Ltd. captive hornbill management to the Project and Mabula & Mokaikai Private Game Reserves will be with us for two years. She joined the team

in April.

Seaworld & Busch Gardens **Natural Encounters**

Virginia Zoo

Montecasino Bird Gardens

Rufford Small Grant

Contributing:

Dallas Zoo

NC Zoo Society

Honolulu Zoo

Birdlife Sisonke

Birdlife SA

Pavilion BLPN

Montecasino Bird Gardens

Zoo Augsberg

In-Kind:

SAPPI: Poster & brochure printing

Chocolate Horse: Design

Natural Encounters: equipment

Sophie Lenoir (France) has just joined the project, bringing her Wildlife Management experience and we hope she will be with us for a year at least.

Hein Nel has passed his FGASA 1 qualifications.

SUMMARY OF SOME OF THE ACTIVITIES OF OUR COLLABORATORS AND PARTNERS:

National Zoological Gardens	Maintains the stud book and captive propagation programme, post-mortems, nutritional & behavioural advice and undertakes all genetics analyses at their state-of-the-art laboratory.
Percy FitzPatrick Institute	Undertakes APNR harvest, wild capture, research into spatial use of habitats and dispersal.
Mpumalanga Tourism and Parks Agency	Delecia Gunn rears harvested chicks, continues education and awareness and acts as the main advisor on hand-rearing and captive socialisation.
JohannesburgZoo	Hosts captive birds; hand-rearing harvested chicks; growing hand-rearing capacity; continued education and awareness; veterinary support; vaccine development.
North West University	Research into tools for selecting reintroduction sites and social/human aspects of the conservation of the species.
Endangered Wildlife Trust	Undertakes nest monitoring, harvest and ringing of fledglings in Kruger National Park, research into habitat use & dispersal.
Montecasino Bird Gardens	Hosts two breeding pairs; awareness campaign; fund-raising, rearing both harvested and captive-bred chicks.
Bester Birds	Hosts birds for the captive breeding programme.
Umgeni River Bird Park	Hosts a pair for captive breeding and is increasing awareness in KwaZulu-Natal.
Boscia Birds	Host captive pair and young birds and hand-rear harvested chicks.
Zaagkuilsdrift Bird Sanctuary	Hosts birds for the captive breeding programme.
Lory Park Zoo	Hosts birds for the captive breeding programme.
Hoedspruit Endangered Species Centre	Hosts birds for the captive breeding programme.
