

Project Update: December 2014

During the autumn we conducted awareness campaign on conservation of *Dinarolacerta* lizards and their importance to biodiversity of Montenegro. We presented our project at 6th Montenegrin Science Festival, gave lectures in local schools and distributed educational material (brochures, t-shirts and posters). Also, we published articles about the project in Montenegrin daily newspaper "Pobjeda" and on the web portal of the Montenegrin naturalists' magazine "Putokaz". During a summer field survey we recorded a new site of *Dinarolacerta montenegrina* in Montenegro. The paper on this finding was published in the journal *Ecologica Montenegrina*. We organised a roundtable discussion to introduce the project and to build up the partnership with decision makers, local and regional environmental NGOs for the further initiatives for conservation of *Dinarolacerta* spp. and their habitats. Finally, the project was presented on national TV channels "Radio Television of Montenegro 1" and "TV News". Read more about our activities at www.dinarolacerta.com.
