

Project Update: November 2015

- 20 plots (50 x 50 m) were made at each of the four selected sites.
- In each plot, availability of tree cavities is being measured.
- Plants sample in two of the sites.
- Intensive nests search with camera devices.
- Search of cavities excavated by woodpeckers.
- All activities included active participation of students from Universidad Nacional de Jujuy and other universities of the country.

Campephilus leucopogon - Cream-backed Woodpecker
