

Project Update: October 2017

During the last week of September 2017, we continued with the fieldwork. We found seven green turtles who were assessed their health status. Also in this time we have been working on lab analysis. On September 29th, I had to postpone the talk at the school "El colibrí" but I am waiting for the confirmation of a new date.

Top left: Green turtle. Top right & Bottom left: Temperature being taken. Bottom right: Heart rate taken.

In the first week of October, I participated in the local television programme Ola TV in which I presented the project "Health Assessments in Sea Turtles from Baja California Sur" and its main advances.

I also inform you that last week (October 11th to 14th), I gave two talks at the 1st. International Meeting on Eastern Pacific Sea Turtles and the 4th. National Meeting on Sea Turtles in Mexico, in the first talk, I presented the project "Health Assessments in Sea Turtles from Baja California Sur" supported by Rufford, at the national level and in the second, I presented the first advances that we have found in health and diseases of sea turtles, including the case of tumour associated to viral particles that we confirm past August (Photos 7, 8, 9 and 91).

We are still working in the laboratory and plan the next field trip for the next week, any progress will keep you informed.
