

Project Update: March 2017

In second half of February and in March we conducted two short field surveys in surroundings of Kraljevo where, according to the plan, we measured snakes, took tissue for DNA analysis and mapped the habitats.

We had our first recaptured viper. We filmed a short HD video on the field and uploaded it on You Tube (<https://www.youtube.com/watch?v=0ikPaZVwnlw&feature=youtu.be>). We filmed releasing nose-horned viper to her habitat after measurement.

Apart from this, we held lecture at primary school "IV Kraljevački bataljon".
