

Project Update: November 2016

1.1 Stakeholder workshop held October 11th 2016. Aceh Province head of government fisheries department opened the meeting of 30 attendees from national, provincial, district government, academics, district fishing commander, Wildlife Conservation Society (WCS), Fauna & Flora International, KUALA and others.

Conclusion was that smaller groups per species should lead coordination of the Aceh's species conservation efforts. WCS volunteered to organise these groups.

WCS has kindly given us their questionnaire as a base to modify for the different species. The process to be followed is:

- Initial scoping, (including limitations) based on survey locations, numbers of fishermen, fishing methods.
- Purposive sampling method and semi-structured Interviews with questionnaire, maps and photos of species.
- Target respondents – 10% of 1500 full-time and seasonal fishermen = 150 interviews.
- Results of interviews will be cross checked, collated and entered into a pre-set matrix to provide mapping data of species, locations.
