

## Project Update: September 2009

The progress of project was as follows:

1. To continue to help the local farmers to check the growth of green mussel (*Perna viridis*) after 6 months of culturing.
2. To help the local farmers to conserve the marine animals (*Diadema setosum*) that are living in the seagrass beds in order to advance the awareness of the local community in the maintaining and protecting the natural environment.

Left: To conserve the *Diadema setosum* in the seagrass beds. Right: To help the local farmers to conserve the marine animals (*Diadema setosum*) that are living in the seagrass beds in order to advance.
