

## Project Update: March 2017

### Researchers Meet

As planned the researchers meet was carried out to collect the data regarding application. The meet was organised in Paro College of Education. A total of 13 researchers turned up to present their findings. Each researcher presented their work in turn. After each presentation questions were raised to clarify the doubts on particular studies. Eight people out of 13 had the same focus on conservation of black-necked crane and white-bellied heron. Other talked on red panda, snow leopard, tigers and Assam macaques. At the end of the meet all the researchers granted permission to use their data for the development of mobile application.

Talk on importance of red panda during researchers meet.

Showing habitat suitability of White Bellied Heron in Bhutan during research meet
