

Project Update: December 2017

In the 3rd update of our project, we have three activities that were held in November and December 2017.

On November 6th-7th 2017, we held the "Basic Molecular Training on DNA Forensic of Sea Turtle" workshop in Madura, East Java, in collaboration with the Marine Science Department, Faculty of Agriculture, Trunojoyo University. 27 people participated in this workshop including students, lecturers and laboratory technicians.

Dhani, one of the team member from Diponegoro University was giving explanation about the protocol used in genetic laboratory work.

On November 29th 2017 we were invited by IKIP PGRI Bali to hold a general lecture on "Biodiversity Conservation through Molecular Study" - institution that we collaborated after the sea turtle workshop in Udayana University.

Dian Pertiwi was giving an explanation about mutual collaboration in scientific research in IKIP PGRI Bali.

We also had a small discussion with WWF-Indonesia and NOAA on December 6th 2017. In this event, NOAA was identifying a potential partner for joining them in the sea turtle project in Indonesia. The research goal was to identify the origin of population of the sea turtle that was located within Indonesian/West Pacific territory.

Discussion with WWF-Indonesia & NOAA regarding sea turtle conservation in Indonesia.
