

## Project Update: January 2018

Between December 2017 and January 14th 2018 we predominantly worked on determination of bryophytes species in the laboratory. Voucher specimens were deposited in the herbarium collection of the University of Montenegro (TGU). Nomenclature follows Ros et al. (2007) for liverworts and Ros et al. (2013) for mosses. For all determinate species are given ecological parameters. In this part of work several liverworts and moss are registered as new for Montenegro and Albania. Data about this species will be published as scientific paper in bryology journal.

Also during this period is done:

- Presentation of the project at Karl-Franzens-Universität Graz, Austria. A lecture titled as "Diversity and ecological analysis of the bryophytes of Cijevna River (Montenegro and Albania)" held at Institute of Plant Sciences on 5<sup>th</sup> December 2017.
- Is prepared presentation of project on 27th RSG CONFERENCE "FROM MOUNTAINS to DEEP SEAS" which will be in Bar from 2nd to 4th February 2018. At this conference project will be presented with lecture: Diversity and Ecological Analysis of the Liverworts in the Cijevna River (Montenegro and Albania). Presentation and abstraction are accepted for the conference.

Determination and storing of materials

Presentation of the project at Karl-Franzens-Universität Graz, Austria.
