

Project Update: August 2018

We have published an article in which we revised Cholevinae (Coleoptera, Leiodidae) of Borneo and described 14 new species. Rufford is acknowledged in the publication for financial support. <https://zookeys.pensoft.net/article/23212/>

I will present the results of the project on 24th International Conference on Subterranean Biology that will take place from 19th to 24th August 2018 in Aveiro, Portugal.

I am currently preparing for the various educational activities and workshops that will be conducted in September during the last phase of the project.
