

Project Update: May 2007

- After six months of planting, the average diameter of mangrove stumps are $1.6123\text{cm} \pm 0.166$ and $1.573\text{ cm} \pm 0.162$ at the replanting area and the supplementary area, respectively. The average long of mangroves are $45.633\text{ cm} \pm 12.44$ and $38.493\text{ cm} \pm 14.7017$, at the replanting area and the supplementary area, respectively.

- Survival rates are about $70.40 \pm 2.966\%$ and $69.60 \pm 1.95\%$ at the replanting area and the supplementary area, respectively.
