

## Project Update: September 2018

We have completed conservation awareness programmes regarding hyena and other carnivore conservation in lowland, Nepal. We did hyena sign survey and habitat assessment in Bara, Rautahat, and Sarlahi forests. Conservation outreach materials were also distributed in those areas. We did group discussion, encouraging local people to conserve hyena and organised programmes among the community forest members, and local people and shared the hyena's ecological role to maintain the forest and grassland ecosystem.
