

Project Update: May 2019

I will be presenting the advances of the project in the AOS meeting in Alaska in July 2019. I have also sent the work to the ICCB to be held in Madagascar in July 2019, and the ATBC to be held in Madagascar in July-August 2019, and was successfully accepted in both.

An adult male in its territory in Cajamarca. The individual was observed during one hour and data collected to estimate the size of the territory. He was actively defending the flowers used. ©Fernando Angulo.

The logistic for the team (local driver, field assistant and myself) during fieldwork in Huaraz region. We drove this truck for five days and we circled the Huascaran National Park in an exciting trip searching for the species. ©Sandra Flor Cuadros Diaz.

After entering deep valleys looking for the species in La Libertad region, we encountered a landslide and had to wait for a while before leaving. I was talking to a local lady that was wondering why I was interested in visiting such a remote area. ©Fernando Angulo.

Among the regions visited, we were very interested in these type of valleys with Andean scrubland, since it resembles the historical habitats. ©Sandra Flor Cuadros Diaz.

Looking at *T. griseiventris* in Cajamarca. Notes on habitat and behaviour were taken afterward. ©Fernando Angulo.
