

Project Update: August 2009

As we would like to conserve the native endangered Sal tree, we have conducted many activities as scheduled in the project's website during the whole project period. We have implemented public extension works to school children, farmers, and communities in the village. And, establishing of nursery farm for Sal trees, planting of young plants, and protecting and checking the project site have been completed with local communities. Most of local residents are interested in our work. We have received encouragement and in-kind support from them.
