

Project Updates: February 2021

Communication is one of our main commitments to this project. In April 2020, we developed the Scientific Dissemination project - Morcegos do Pampa, which aims to raise the awareness of the general population. We built pages on social networks (Facebook, Instagram, Twitter and YouTube - <https://linktr.ee/morcegosdopampa>), which today have over 1000 followers and are regularly updated with comprehensive and accessible information about Pampa biome and its bats. We develop illustrated materials, animations and videos, in Portuguese and English, with information about the occurrence and ecology of bats, in addition to participating in online lectures specially dedicated to students in the region.
