Project Update: March 2022

During our project, we have developed a partnership with the ministry of Education. This partnership has allowed us to conduct 15 information sessions to local schools. These information sessions were conducted in three regions: Gabès, Medenine and Djerba. In each session promotional material was spread to help raise awareness for wetlands and the conservation of waterbird.

A field visit was also organised for a group of students from the "EcoRecycling Al Manara School club" and their parents. This visit was conducted in two wetlands of international importance for birds: lagoon of Boughrara and El Grine.

In collaboration with the association « Oasis des Sciences », a field visit for Sebkhet Dreiaâ (IBA) was also carried out for the Volunteers of the Student Organization (AEISEC, Gabes) and the Students of the Youth School 2 (Matoouia, Gabes).

The aim of these field visits is to observe waterbirds and increase awareness for the conservation of waterbirds, and their habitats.
