

Project Update: April 2011

A total of five primary schools have so far been visited - Kubar, Obambo, Kanyaboli, Gendro and Nyalula. We are visiting secondary schools including Obambo and Nyalula Secondary schools. Like the community, schools too have been so much interested in nursery preparation exercises and this we have solved with the help of the forest officer with whom we were working closely; he took the students through the various steps involved in nursery preparation this is because most of the schools do intend to keep nurseries where they can have access to seedlings to plant in their school compounds and some for commercial purposes in future. School training component has so far been going on so well and is soon coming to an end as the project team gets ready for the follow-up workshop and completion of the project.
