

## Project Update: May 2023

For our tag orders, we contacted the company in March 2023 and placed our order at the beginning of April, they are now in the production process. We also placed receivers in the region last week. On the other hand, we continue our snorkelling and real time monitoring activities in the region. Eleonora de Sabata and Simona Clo from MedSharks accompanied us on our snorkelling study we did last week. But since the water temperature is lower than expected, our rate of encountering sand sharks is lower than in previous years. Therefore, we are waiting for at least July 2023 to tagging.
