

Project Update: October 2023

I am just contacting you to let you know that fog-water harvesting, and provision systems were successfully installed at all five sites as planned.

The sites, all with relevance for regional conservation and within the Casablanca's administration, comprise the following: Indomita vineyards, Los Maitenes, Lo Vásquez, Mundo nuevo, and La Playa.

Harvested fog-water will begin to be periodically registered from flowmeters, and fauna audiovisual records saved from trail cameras.

Also, two divulgation activities are to be developed during November 2023 at Casablanca.
