

Project Update: May 2010

Data has been collected for the rainy season in 2009. More data is being collected for the dry season field work in 2010. Analyses of both season's data will be carried out as soon as the dry season data collection is completed.

View of study area during dry season.

Data collection during the dry season. Most areas in the reserved burnt.

Newly constructed nest in the dry season (Chestnut-crowned Sparrow Weaver *Plocepasser superciliosus*).
